

JOHN
JUST TOOK A
SHOWER WITH A
LOW FLOW
SHOWER HEAD

Don't worry John, It's no big deal.

Older shower heads use approx. 200 litres during a 10 minute shower. Its easy to install a low flow showerhead that uses 9.5 litres/minute or less while performing just as well as older versions. Go one step further and take shorter showers.

WATER
EFFICIENCY
ABIGDEAL

Water efficiency is a big deal, but don't worry, there are simple and easy measures that will assist in achieving our goal of a 27% reduction in the Comox Valley water system by 2014.

The water efficiency plan is a partnership between the City of Courtenay, the Town of Comox and the Comox Valley Regional District.

For more information on the plan and what you can start doing right now visit www.comoxvalleyrd.ca/water.
