

# Home Energy Efficiency

## T I P S

**Wondering what products can help you save energy in your home?**

Reducing energy consumption through reducing air leakage, reducing water consumption, increasing insulation levels, upgrading mechanical systems and upgrading appliances, will all help you cut your utility bills! Here's some products we found to fit EVERY budget, to help you save and reduce your carbon footprint!

### **Energy efficiency products < \$50.00**

Spray foam                      Window Plastic                      Weatherstripping  
Caulking Door Sweep              Pipe insulation                      Clothes line kit LED bulbs  
Hot water tank blanket              Solar Lighting                      Energy Outlet Monitor  
Low flow shower head              Attic hatch insulation  
Low/dual flush toilet conversion kit

### **Energy efficiency products \$50.00-\$100.00**

Dual flush/ low flush toilet                      Programmable thermostat  
Building wrap as an air barrier                      Reflective material  
Polyurethane vapour barrier to seal out moisture and air

### **Energy efficiency products > \$100.00**

Increase insulation levels in attic, crawlspace/basement, exposed floors/cantilevers with fiberglass batt insulation, rigid board foam insulation or blown cellulose insulation.  
Heat pump-air source, mini-ductless, air to water source, ground source or geothermal heating system  
Instant gas hot water- condensing/non                      LED Yard light  
Hot water tank upgrade                      Solar hot water system  
Micro Wind generation system                      Resealing of windows  
Photovoltaic panel with a micro inverter

**Elemental Energy Advisors**
