

Trail Option 1

Design:

- Shared multi-use trail for pedestrians, bikes and horses.
- Same width as trail constructed through village.
- 1.7 – 2 m wide, packed 1" minus gravel.

Pros:

- Small disturbance footprint.
- Lowest construction cost.
- Shared trail can work if there is little equestrian use.

Cons:

- If used frequently by horses, trail surface will get rough and has to be repaired more often (higher ongoing maintenance costs).
- Potentially rough trail surface may make use difficult for other users.
